**Body-Jet®, State of the Art Water-Jet Assisted Liposuction Technology
To be Featured on National Television Show, *The Doctors* This Week**

(Dallas, Texas) Eclipsemed Ltd, a leading national distributor of advanced medical and aesthetic equipment, and Human Med AG, of Germany, a leading manufacturer of medical and aesthetic devices have announced that its Body-Jet, water-jet assisted liposuction technology will be featured on *The Doctors* national television program on Friday, March 20, 2009 as part of their “Aging Through the Decades” show.

The Body-Jet procedure will be performed by Jeffrey B. Schafer, M.D., cosmetic and reconstructive surgeon of New Image Cosmetic Surgery in Coronado, CA. Dr. Schafer will be shown performing a body sculpting procedure with the Body-Jet on a woman in her 20s. Other anti-aging procedures will be performed on women in the 30s, 40s and 50s.

Body-Jet provides a novel approach to removing fat by utilizing a gentle and controlled sequence of pulsed sprayed saline to dislodge mainly intact fat cells. This new approach affords a less traumatic liposuction experience for patients with often times less discomfort and downtime, quick healing and visibly precise results. In many cases general anesthesia is not necessary. Additionally, the science behind Body-Jet’s method of water-jet assisted liposuction allows for better assessment of new contours during surgery which greatly reduces the number of corrective procedures that need to be performed.

Over 1500 Body-Jet procedures have been performed successfully worldwide and physicians and surgeons are currently being trained throughout the U.S.

Check local listings for airtime to see Dr. Schafer perform the Body-Jet procedure on *The Doctors*.
